

## **GUIDE TO FLYSTRIKE CHEMICAL ROTATION**

PREVENTION

Consider the chemical group that was last applied (either earlier this season or at the end of the previous fly season) and where practical, avoid using a chemical from the same group next.

2 ) LICE CONTROL

Consider the chemical group that was last used to control lice and avoid using a chemical from the same group for the next preventative flystrike application in the same season.

3 DRESSING/TREATMENT

Consider the chemical groups that were last applied to prevent flystrike and avoid using these as dressings to treat struck sheep this season.

ALWAYS READ AND FOLLOW THE PRODUCT LABEL Visit www.flyboss.com.au for more information on flystrike management
